TITLE INDEX

Addendum	198
<i>Llorenç Balsach:</i>	
Application of Virtual Pitch Theory in Music Analysis	244
<i>Jan L. Broeckx:</i>	
Beyond Metaphor: Musical Figures or 'Gestalte' as Expressive Icons ...	266
<i>Insook Choi:</i>	
A Chaotic Oscillator as a Musical Signal Generator in an Interactive Performance System	17
<i>Giovanni De Poli and Paolo Prandoni:</i>	
Sonological Models for Timbre Characterization	170
<i>Peter Desain and Henkjan Honing:</i>	
CLOSE to the Edge? Advanced Object-Oriented Techniques in the Representation of Musical Knowledge	1
<i>Shlomo Dubnov, Naftali Tishby and Dalia Cohen:</i>	
Polyspectra as Measures of Sound Texture and Timbre	277
<i>John Geake:</i>	
Individual Differences in the Perception of Musical Coherence	201
<i>Didier Guigue:</i>	
Sonic Object: A Model for Twentieth-Century Music Analysis	346
<i>A.J.M. Houtsma:</i>	
Pitch and Timbre: Definition, Meaning and Use	104
<i>Gerald Langner:</i>	
Temporal Processing of Pitch in the Auditory System	116
<i>Marc Leman:</i>	
Introduction	103

Marc Leman:

- The Convergence Paradigm: Ecological Modelling, and
Context-Dependent Pitch Perception 133

Powen Ru and Shihab A. Shamma:

- Representations of Musical Timbre in the Auditory Cortex 154

Naoki Saiwaki, Kunio Kato and Seiji Inokuchi:

- An Approach to Analysis of EEGs Recorded During Music Listening . . 227

Martijn Voorvelt:

- The Environmental Element in Barry Truax's Compositions 48

Robert Walker:

- Visual Metaphors as Music Notations for Sung Vowel Spectra in
Different Cultures 315

Studies on New Music Research **Musical Signal Processing**

Edited by

Curtis Roads, Stephen Travis Pope, Aldo Piccialli†, and Giovanni de Poli

Compiled by an international array of musical and technical specialists, *Musical Signal Processing* opens the door to the most important topics in musical signal processing today. Beginning with basic concepts, and leading to advanced applications, it covers such essential areas as sound synthesis (including detailed studies of physical modelling and granular synthesis), control signal synthesis, sound transformation (including convolution), analysis/resynthesis (phase vocoder, wavelets, analysis by chaotic functions), object-oriented and artificial intelligence representations, musical interfaces, and the integration of signal processing techniques in concert performance.

CONTENTS:

Part I. Foundations of musical signal processing

G. Borin, G. De Poli, A. Sarti, M.-H. Serra, X. Serra

Part II. Innovations in musical signal processing

G.-P. Evangelista, S. Cavaliere, A. Piccialli, A. Bernardi, G.-P. Bugna, G. De Poli, J.O. Smith III

Part III. Musical signal macrostructures

R. Dannenberg, P. Dessain, H. Honing, S.T. Pope, A. Camurri, M. Leman

Part IV. Composition and signal processing

G. Sica, C. Roads, A. Vidolin

The audience includes electronic and computer musicians, engineers, acousticians, and instrument designers. *Musical Signal Processing* is designed to be adopted in courses on musical sound synthesis and sound processing, in research centers, conservatories, and university departments of music, acoustics, computer science, and engineering. The chapters in *Musical Signal Processing* have been written according to a two-part structure: the first half tutorial, the second half advanced. Thus any chapter should be accessible to students in the field.
